

Implementation of Port Operations Management System (POMS)

Kolkata Port Trust is going to implement and operate Port Operations Management System (POMS) fully on and from 01/10/10. The System has been developed with an aim to integrate the operational activities of Kolkata Dock System viz. Vessel, Cargo, Container and Railways with the Finance module. The system is also being integrated seamlessly by accepting the inputs from Customs and Port Community System (PCS) in the form of electronic messages with an objective to minimizing user intervention and attaining eventually the goal of paperless regime. All the concerned Stake Holders would be benefitted in their daily transactions with KDS. once the system is fully in place. They are requested to extend full co-operation to make the system a success.
