July 8, 2019

### CIRCULAR

It has been observed that a substantial part of the drainage system inside dock is being choked by dry bulk cargo flown with rainwater from various storage yards. Such choking of the drainage system eventually results in waterlogging of the open storage spaces thus creating hindrance in yard operation in general and stacking/ reclaiming of cargo in particular.

In view of the above, licensees of the plots allotted inside dock for transit storage of cargo are hereby advised to take following preventive measures to stop seepage of cargo into the drains from the plots under their occupation.

1. Making temporary barriers filled with cargo/ sand along the edge of the cargo stacks.
2. Covering of cargo stacks and securing the same with suitable tie-down arrangements during rain.

The above is for strict compliance please.
